

```

#include <stdio.h>
#include <stdlib.h>
void allocArray(int ***p, int m, int n)
{
    // Allocate memory for the array of pointers (rows)
    *p = (int **)malloc(m * sizeof(int *));

    // Allocate a single block of memory for all elements
    int *data = (int *)malloc(m * n * sizeof(int));

    // Set each row's pointer to the correct position in the memory block
    for (int i = 0; i < m; i++) {
        (*p)[i] = &data[i * n];
    }
}

int main()
{
    int **array, *a;
    int j, k;
    allocArray(&array, 5, 10);
    for(j = 0; j < 5; j++)
        for(k = 0; k < 10; k++)
            array[j][k] = j * 10 + k;
    for(j = 0; j < 5; j++)
        for(k = 0; k < 10; k++)
            printf("%p ", &(array[j][k]));
}

```
