

```
#include <stdio.h>
int main()
{
    float var;
    scanf("%f", &var);
    float roundofresult;
    if (var >= 0){
        roundofresult = (((int)(var * 100 + 0.5)) / 100.0);
    }
    else {
        roundofresult = (((int)(var * 100 - 0.5)) / 100.0);
    }

    float rounddownresult;
    if (var >= 0){
        rounddownresult = (int)(var * 100) / 100.0;
    }
    else {
        rounddownresult = (int)(var * 100 - 1) / 100.0;
    }
    printf("%.2f\n", roundofresult);
    printf("%.2f\n", rounddownresult);
}
```
