

```
#include <stdio.h>

int main() {
    // Declare pointers to integers
    int *a, *b;

    // Initialize pointers using `init`
    init(&a, &b);

    // Initialize sum to 0
    int sum = 0;

    // Loop through the elements pointed to by the pointers, from a to b
    for (int *i = a; i < b; i++) {
        // Add the value of the element pointed to by i to the sum
        sum += *i;
    }

    // Print the sum
    printf("%d", sum);

    return 0;
}
```
